

UX CASE STUDY

Zomato – Food Delivery Application

❖ Introduction

What is Zomato?

Zomato is one of India's leading food delivery and restaurant discovery platforms. It enables users to search for nearby restaurants, browse menus, place food orders, reserve tables, and track deliveries in real time. The application aims to provide a seamless experience from discovering restaurants to receiving food at the user's doorstep.

The platform serves millions of users every day by offering a wide variety of cuisines, personalized recommendations, customer reviews, and multiple payment options.

Objective of this UX Case Study

This UX case study evaluates the user experience of Zomato's food ordering process. The goal is to identify usability strengths, discover pain points faced by users, and recommend practical improvements that enhance overall user satisfaction.

About the Application

Feature	Details
Application name	Zomato
Category	Food Delivery
Platform	Android,iOS,website
Primary Users	Students,Professionals,Families
Main Services	Food Delivery,Dining,Reviews

What problem does Zomato solve?

People often struggle to find restaurants, compare food options, and receive meals conveniently. Traditional ordering methods require calling restaurants individually and provide little transparency regarding delivery status.

Zomato solves this problem by offering a single platform where users can:

- Search restaurants
- Compare prices
- Read reviews
- Order food
- Track deliveries
- Pay securely

Target Users

Students:

Need affordable meals with discounts.

Office Employees:

Prefer quick lunch delivery.

Families:

Order meals for multiple people.

Food Enthusiasts:

Explore new restaurants and cuisines.

User Journey

Step 1

Open Application.

The user launches Zamato and reaches the home page.

Step 2

Search Food

The user searches for "Pizza."

Step 3

Choose Restaurants

The user compares:

Rating

Price

Delivery Fee

Reviews

Step 4

Browse Menu.

The user views available items and customization options.

Step 5

Add to cart.

The selected food item is added to the cart.

Step 6

Apply Coupons.

The user attempts to apply available discounts.

Step 7

Payments.

The user selects UPI, Credit Card, Cash, Wallet

Step 8

Track Order

The user monitors delivery progress until food arrives.

UX Analysis

Strengths

1. Easy Navigation

The interface is clean and easy to understand even for first-time users.

2. Excellent Search

Restaurants appear quickly with smart suggestions.

3. Attractive Food Images

Large images help users decide faster.

4. Real-Time Order Tracking

Users know exactly where the delivery partner is.

5. Multiple Payment Methods

Various payment options improve convenience.

6. Reviews & Ratings

Users can make informed decisions.

Weaknesses

1. Too Many Promotions

The interface contains several promotional banners that can distract users.

2. Coupon Selection is Difficult

Users often need to test multiple coupons manually.

3. Restaurant Pages Feel Crowded

Offers, ads, recommendations, and banners compete for attention.

4. Hidden Charges

Delivery charges and platform fees become fully visible only near checkout.

5. Filters Require Multiple Clicks

Finding specific food preferences can take extra effort.

Recommendations

Improvement 1: Automatic Best Coupon

Problem:

Users spend time finding the best coupon.

Solution:

Automatically apply the highest discount.

Benefits

- Saves time
- Better experience
- Higher satisfaction

Improvement 2:Cleaner Restaurant Page

Problem

Restaurant pages feel overloaded.

Solution

Collapse promotional sections.

Benefit

Better readability.

Improvement 3:Food Comparison Feature

Problem

Users switch between restaurants to compare dishes.

Solution

Add a comparison option.
